***Keep your oral health in mind during this busy time of year;
make it a tradition to see your dentist twice per year!***

Don't wait until it HURTS!

Establishing a healthy regimen of daily oral hygiene in combination with regular dental visits will help save your teeth, gums, and maybe some time and money as well. Those are both reasons to smile!

Your dentist and dental hygienist can help guide you through changes to your mouth and body and help you keep your smile sparkling.

It is important to schedule a visit with the dentist twice per year. During your exam and review of your x-rays the Dr. can detect early decay, check for any signs of gum disease, changes in your tissue, screen for oral cancer and recommend treatment to keep you healthy.

Waiting to schedule clinically necessary treatment can become more time consuming and costly. Don't delay!
Schedule your visit today!

In this season of reflections, we wish to tell you how much we appreciate you. Your friendship, support, and best wishes for us warm our hearts and fill our sprits.

This time of year the best gift that we could receive would be a referral from you! Tell your friends and family members about your experience in our office.

Dental Evolution

Dentistry is a dynamic profession with new trends evolving. Minimally invasive dentistry is becoming not just a concept but a way of practicing. Creative minds are finding ways, materials, and technology that enable patients to experience less hard-tissue or soft-tissue removal, and improve prevention and maintenance.

Minimally invasive cosmetic dentistry serves to conserve healthy tooth structure by allowing the dentist to perform the least amount of dentistry needed. This entails never removing more tooth structure than is required to restore teeth to their optimal condition. Once natural tooth structure is lost either to gum disease or decay it cannot simply grow back. It is forever gone and its maintenance can become an issue as restorative devices have a finite lifespan and will not last forever.

Our dental office strives to create a relaxing and safe environment for the patient. The dental profession is evolving everyday for the benefit of patients.
